THE DIY RAINBOW RUBIN GOOP

ABOUT
In March at the Rubin Museum we celebrate Holi, a Hindu festival that marks the arrival of spring, honoring fertility, color, and love as well as the triumph of good over evil. During this two-day festival, which is celebrated in most parts of Nepal and India and is widely known as the “Festival of Color,” participants throw colored powders at one another. To get in the spirit, we’re bending the rules by allowing visitors to draw on the walls and paint on the floors while creating some fun neon lights as well.

MATERIALS
1. 14 oz. corn starch
2. 10 oz.
3. Fluorescent or glow-in-the-dark paint (up to 5 different colors)
4. Bowl
Step 1
In the bowl, slowly add the water to the cornstarch until the mixture is interchangeable. This means that when you move your hands quickly, you can pick up the goop, but once it’s in your hands the goop will turn into a liquid and ooze from your fingers.

Step 2
Add the fluorescent or glow-in-the dark paint. You can add up to 5 different colors.

Step 3
Now mix and HAVE FUN with your goop.
